1. Application

This specifications applies to the color 18.1" SXGA TFT-LCD module LQ181E1DG44.

- ◎These specification sheets are the proprietary product of SHARP CORPORATION("SHARP) and include materials protected under copyright of SHARP. Do not reproduce or cause any third party to reproduce them in any form or by any means, electronic or mechanical, for any purpose, in whole or in part, without the express written permission of SHARP .
- ◎The device listed in these specification sheets was designed and manufactured for use in OA equipment .
- ◎In case of using the device for applications such as control and safety equipment for transportation(aircraft, trains, automobiles, etc.), rescue and security equipment and various safety related equipment which require higher reliability and safety, take into consideration that appropriate measures such as fail-safe functions and redundant system design should be taken .
- ◎Do not use the device for equipment that requires an extreme level of reliability, such as aerospace applications, telecommunication equipment (trunk lines), nuclear power control equipment and medical or other equipment for life support .
- ◎SHARP assumes no responsibility for any damage resulting from the use of the device which does not comply with the instructions and the precautions specified in these specification sheets .
- ◎Contact and consult with a SHARP sales representative for any questions about this device .

2. Overview

This module is a color active matrix LCD module incorporating amorphous silicon TFT (Thin Film Transistor). It is composed of a color TFT-LCD panel, driver ICs, control circuit, power supply circuit and a back light unit. Graphics and texts can be displayed 1280*3*1024 dots on a panel with about 16 million colors (8 bit) by supplying 48 bit data signals(8 bit*2pixel *RGB), two timing signals, +12V DC supply voltage for TFT-LCD panel driving and supply voltage for back light.

3. Mechanical Specifications

Parameter	Specifications	Unit
Display size	48 (Diagonal)	cm
	18.1 (Diagonal)	inch
Active area	359.0 (H) × 287.2 (V)	mm
Pixel format	1280 (H) × 1024 (V)	pixel
	(1 pixel=R+G+B dots)	
Pixel pitch	0.2805 (H) × 0.2805 (V)	mm
Pixel configuration	R,G,B vertical stripe	
Display mode	Normally white	
Unit outline dimensions *1	408.0 (W) × 335.6 (H) × 14.0(D)	mm
Mass	2200+-150	g
Surface treatment	Anti-glare and hard-coating 2H (Haze value = 28)	

*1.Note: excluding back light cables .

The thickness of module (D) doesn't contain the projection.

Outline dimension is shown in Fig.1

6-2. Back light driving

The back light system is an edge-lighting type with a four of CCFT (Cold Cathode Fluorescent Tube).

The characteristics of the lamp are shown in the following table.

The value mentioned below is at the case of one CCFT.

CCFT Model Name : MBT26B7RX377NRU/G (HARISON TOSHIBA LIGHTING Corp.)

Parameter	Symbol	Min.	Typ.	Max.	Unit	Remark
Lamp current range	I _L	2.5	6.0	6.5	mArms	【Note1】
Lamp voltage	V _L	—	720	—	Vrms	Ta=25°C
Lamp power consumption	P _L	—	4.32	—	W	【Note2】
Lamp frequency	F _L	35	60	70	KHz	【Note3】
Kick-off voltage	V _s	—	—	1300	Vrms	Ta=25°C 【Note4】
		—	—	1600	Vrms	Ta=0°C 【Note4】
Lamp life time	L _L	50000	—	—	hour	【Note5】

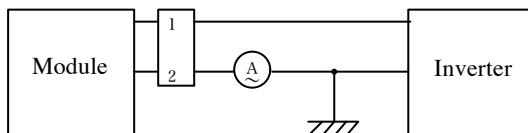

【Note1】 A lamp can be light in the range of lamp current shown above.

Maximum rating for current is measured by high frequency current measurement equipment connected to V_{LOW} at circuit showed below .

(Note : To keep enough kick-off voltage and necessary steady voltage for CCFT .)

Lamp frequency : 35~70kHz

Ambient temperature : 0~50°C

* 2pin is V_{LOW}

【Note2】 Referential data per one CCFT by calculation (I_L × V_L).

The data doesn't include loss at inverter .

【Note3】 Lamp frequency of inverter may produce interference with horizontal synchronous frequency, and this may cause horizontal beat on the display. Therefore, adjust lamp frequency, and keep inverter as far as from module or use electronic shielding between inverter and module to avoid interference.

【Note4】 The voltage above this value should be applied to the lamp for more than 1 second to startup. Otherwise the lamp may not be turned on .

【Note5】 Lamp life time is defined as the time when either ① or ② occurs in the continuous operation under the condition of Ta=25°C and I_L=6.0±0.5mArms .

① Brightness becomes 50% of the original value under standard condition.

② Kick-off voltage at Ta=0°C exceeds maximum value, 1600Vrms .

《Note》 The performance of the back light, for example life time or brightness, is much influenced by the characteristics of the DC-AC inverter for the lamp .When you design or order the inverter, please make sure that a poor lighting caused by the mismatch of the back light and the inverter (miss-lighting, flicker, etc.) never occurs. When you confirm it, the module should be operated in the same condition as it is installed in your instrument.

Use the lamp inverter power source incorporating such safeguard as overvoltage / overcurrent protective circuit or lamp voltage waveform detection circuit, which should have individual control of each lamp.

In case one circuit without such individual control is connected to more than two lamps, excessive current may flow into one lamp when the other one is not in operation.

7. Timing characteristics of input signals

7-1. Timing characteristics

Timing diagrams of input signal are shown in Fig.4.

	Vertical blanking width	TVb	2	38	222	line	

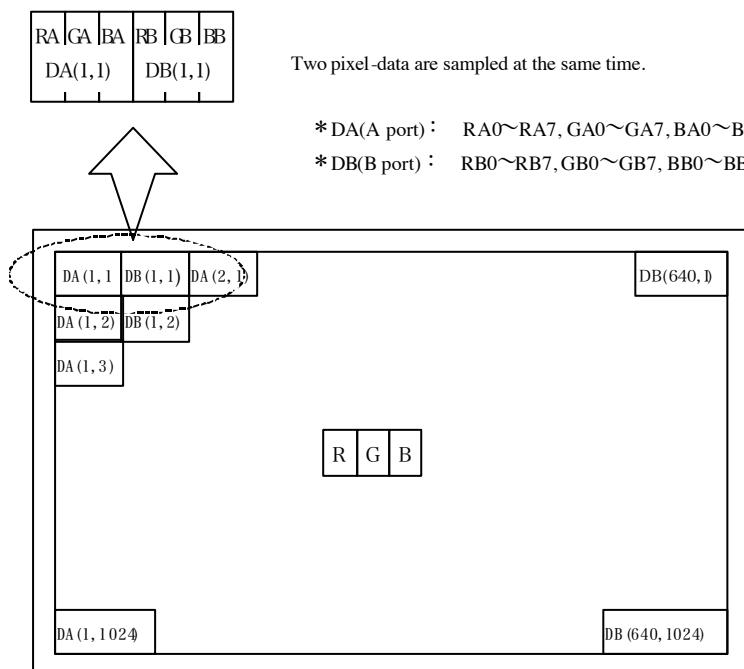

【Note1】 Two pixel-data are sampled at the same time.

【Note2】 In case of using the long vertical period, the deterioration of display quality, flicker etc. may occur.

There should be integral horizontal period per one vertical period.

7-2. Input Data Signals and Display Position on the screen

Graphics and texts can be displayed on a $1280 \times 3 \times 1024$ dots panel with 16M colors by supplying 48 bit data signal (8bit/color [256 gray scales] $\times 3 \times 2$ pixels).

0 : Low level voltage, 1 : High level voltage.

Each basic color can be displayed in 256 gray scales from 8 bit data signals. According to the combination of total 48 bit data signals, the 16-million-color display can be achieved on the screen.

* The measurement shall be executed 30 minutes after lighting at rating.

The optical characteristics shall be measured in a dark room or equivalent state with the method shown in Fig.3 below.

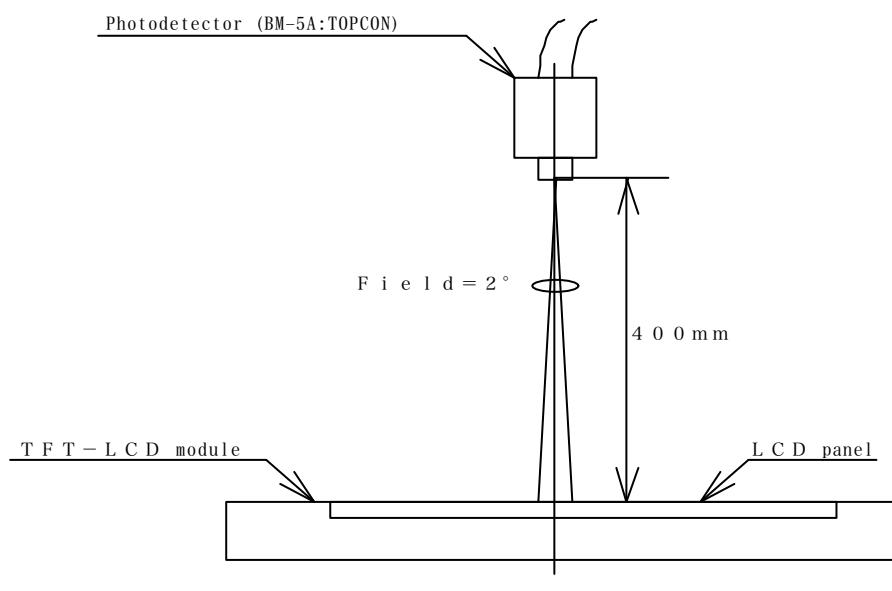

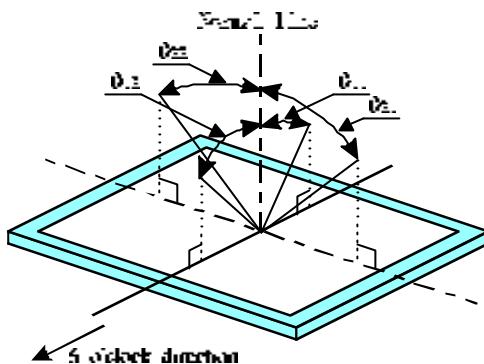

Fig.3 Optical characteristics measurement method

【Note1】 Definitions of viewing angle range:

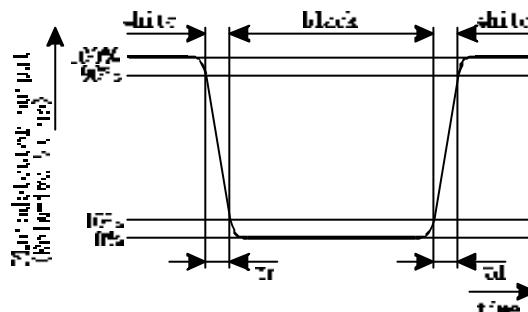

【Note2】 Definition of contrast ratio:

The contrast ratio is defined as the following .

$$\text{Contrast Ratio (CR)} = \frac{\text{Luminance (brightness) with all pixels white}}{\text{Luminance (brightness) with all pixels black}}$$

【Note3】 Definition of response time:

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white" .

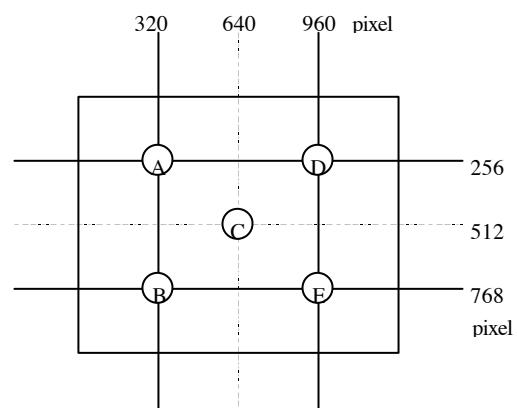

【Note4】 This shall be measured at center of the screen .

【Note5】 Definition of white uniformity:

White uniformity is defined as the following with five measurements (A~E) .

$$\delta W = \frac{\text{Maximum Luminance of five points (brightness)}}{\text{Minimum Luminance of five points (brightness)}}$$

10. Handling Precautions

- a) Be sure to turn off the power supply when inserting or disconnecting the cable.
- b) Be sure to design the cabinet so that the module can be installed without any extra stress such as warp or twist.
- c) Since the front polarize is easily damaged, pay attention not to scratch it.
- d) Since long contact with water may cause discoloration or spots, wipe off water drop immediately.
- e) When the panel surface is soiled, wipe it with absorbent cotton or other soft cloth.
- f) Since the panel is made of glass, it may break or crack if dropped or bumped on hard surface. Handle with care.
- g) Since CMOS LSI is used in this module, take care of static electricity and take the human earth into consideration when handling.
- h) Make sure the four mounting holes of the module are grounded sufficiently. Take electro-magnetic interference (EMI) into consideration.
- i) The module has some printed circuit boards (PCBs) on the back side. Take care to keep them from any stress or pressure when handling or installing the module; otherwise some of electronic parts on the PCBs may be damaged.
- j) Observe all other precautionary requirements in handling components.
- k) When some pressure is added onto the module from rear side constantly, it causes display non-uniformity issue , functional defect, etc. So, please avoid such design.
- l) When handling LCD modules and assembling them into cabinets, please be noted that long-term storage in the environment of oxidization or deoxidization gas and the use of such materials as reagent,solvent, adhesive, resin, etc. which generate these gasses, may cause corrosion and discoloration of the LCD modules.

11. Packing form

- a) Piling number of cartons : Max. 10 cartons
- b) Packing quantity in one carton : 2 modules
- c) Carton size[mm] : 563 (W)×483 (D)×136 (H)
- d) Total mass of one carton filled with full modules : Max. 6150 g
- e) Packing form is shown in Fig .2

12. Reliability test items

No.	Test Item	Conditions
1	High temperature storage test	Ta=60°C 240h
2	Low temperature storage test	Ta=-25°C 240h
3	High temperature & high humidity operation test	Ta=40°C 90%RH 240h (No condensation)
4	High temperature operation test	Ta=50°C 240h (The panel temp. must be less than 60°C)
5	Low temperature operation test	Ta=0°C 240h
6	Vibration test (non- operating)	Frequency : 10~57Hz/Vibration width (one said) : 0.075mm : 58~500Hz/Gravity : 9.8m/s ² Sweep time : 11minutes Test period : 3 hours (1 hours for each direction X,Y,Z)
7	Shock test (non- operating)	Max, gravity : 490m/s ² Pulse width : 11 ms, sine wave Direction : ±X, ±Y, ±Z once for each direction

【Result Evaluation Criteria】

Under the display quality test conditions with normal operation state, these shall be no change which may affect practical display function.

3) Adjusting volume have been set optimally before shipment, so do not change any adjusted value.

If adjusted value is changed, the specification may not be satisfied.

4) Disassembling the module can cause permanent damage and should be strictly avoided.

5) Please be careful since image retention may occur when a fixed pattern is displayed for a long time.

6) When any question or issue occurs, it shall be solved by mutual discussion.
