LIQUID CRYSTAL DISPLAY
PRODUCT INFORMATION

15cm FULL-COLOR
TFT-LCD MONITOR MODULE
TFD58W22MW

1. FEATURE

- (1) 15cm (5.8 inch) diagonal and wide display. (The ratio 16(W) : 9(H))
- (2) High resolution display. (400(W) x 234(H) pixel)
- (3) High luminance. (350 cd/m²)
- (4) Wide viewing angle spec.
- (5) Wide range temperature. (operating : -20 to +60°C, storage : -40 to +85°C)
- (6) Anti-glare surface.
- (7) Composite video signal (NTSC/PAL) and analog RGB signal (NTSC/PAL) interface.
- (8) +9.0V single power supply.

2. MECHANICAL SPECIFICATIONS

ITEM		SPECIFICATION	UNIT
DISPLAY SIZE		15 cm diagonal (5.8 inch)	-
CONTENTS		TFT-cell, Drivers, Timing controller, Video interface, Backlight, Power supply(DC/DC), Inverter(DC/AC)	-
DISPLAY MODE		TN Full-color, a-Si TFT active matrix, Normally-white	-
POWER SUPPLY		+ 9.0 V (single power supply)	V
INPUT SIGNALS	SIGNAL	*NTSC/PAL Composite video signal *NTSC/PAL Analog RGB signal and Composite sync.	-

Note 1 : Do not exceed the maximum rating values under the worst probable conditions taking in to account the supply voltage variation, input voltage variation, variation in part constants, and ambient temperature and so on. Otherwise the module may be damaged.

Note 2 : Environmental temperature.
(Environmental temperature when cased with external size bigger than LCD by 5mm per each dimension.)

Note 3 : The temperature of the module rises under the influence of the backlight.
please design that sny parts of this monitor module dose not to exceed 85°C .

Note 1 : The recommended operating conditions show the ranges in which the device can operate normally. Operation beyond the limit of the recommended operating conditions is not assured, even though operating conditions are within the limit of the absolute maximum ratings.

Note 2 : Use power supplies with capacity lower than 3A.

Note 3 : Optimization of input voltage on viewing angle is necessary.

9. ELECTRICAL CHARACTERISTICS

Common Test Conditions : $T_a=25\pm 5^\circ\text{C}$, $V_{BL}=+9.0\text{V}$, $V_{CC}=+9.0\text{V}$, $V_{SS}=0\text{V}$, $BRT=2.5\text{V}$, $DIM=3.90\text{V}$,
Measured after 30 minutes operation.

11. For Safety

LCD module is generally designed with precise parts to achieve light weight and thin mechanical dimensions.

In using our Modules, make certain that you fully understand and put into practice the warnings and safety precautions detailed in Engineering Information No.EE-N001A, "CAUTIONS AND INSTRUCTIONS FOR TOSHIBA LCD MODULE".

Refer to individual specifications and TECHNICAL DATA sheets for more detailed technical information.

(1) Special Purposes

Please inform and consult Toshiba when LCD monitor is used for the equipment that relates to the safety of human body or human life.

(2) Disassembling or Modification

Do not disassemble or modify the monitor. It may damage sensitive parts inside LCD module, and may cause scratches or dust on the display.

Toshiba does not warrant the monitor, if customer disassembled or modified it.

(3) Breakage of LCD Panel

Do not ingest liquid crystal material, do not inhale this material, and do not contact the material with skin, if LCD panel is broken and liquid crystal material spills out.

If liquid crystal material comes into mouth or eyes, rinse mouth or eyes out with water immediately.

If this material contact with skin or cloths, wash it off immediately with alcohol and rinse thoroughly with water.

(4) Glass of LCD Panel

Be careful with chips of glass that may cause injuring fingers or skin, when the glass is broken.

(5) Electric Shock

Disconnect power supply before handling LCD monitor. Do not touch the parts inside LCD module in order to prevent electric shock.

(6) Absolute Maximum Ratings and Power Protection Circuit

Do not exceed the absolute maximum rating values under the worst probable conditions caused by the supply voltage variation, input voltage variation, variation in parts constants, environmental temperature, etc., otherwise LCD module may be damaged.

Suitable protection circuit should be applied for each system design.

(7) Disposal

When dispose LCD monitor, obey to the applicable environmental regulations.

(8) Power Supply Output

Be sure that power supply output from the system should be limited to smaller values than listed below.

It is because this LCD monitor explained in this data sheet has a current limiter, or a circuit with such function at power input lines, but there may be some possibility of overheat and/or burning of LCD monitor and its peripheral devices before current limiter of the monitor when open-short test of the module is performed by using higher power supply than following recommended value.

Power supply	Recommended maximum output current of power supply
V_{BL}, V_{CC} TOTAL	$\leq 3A$
